Benefits	Based on Local Market Rates
Travel	Some travel options possible, to remote villages where our systems are deployed

Company Overview

Advancing Engineering Consultants (AE) is an engineering consulting firm focused on infrastructure projects throughout Southeast Asia. The AE team has many years of combined experience in a wide range of disciplines including construction engineering management, civil, structural, renewable energy, and electrical engineering.

AE provides engineering and development services for Electric Vine Industries (see www.electric-vine.com), enabling solar-PV village electrification. Electric Vine Industries (EVI) is a private microgrid developer that exists to bring sustainable energy access and income generation opportunities to unelectrified households throughout Southeast Asia, especially eastern Indonesia. EVI has developed a unique village electrification architecture called the Solar Vine with "smart meters" and "smart inverters" at its core. Users pre-pay for electricity using their mobile phone. The meters are connected to the mobile network, and monitored online via a smart-metering management software package.

Fundamentally, this architecture involves the Internet-of-Things (IoT), and will benefit from a variety of other advanced computing technologies such as predictive analytics through machine learning (ML). AE is developing this software platform and we need experienced software developers to help bring sustainable, renewable energy access to remote, off-grid Indonesia.

ASP.NET Web Developer Responsibilities

Advancing Engineering Indonesia (AE) is looking to identify an experienced Front-End Web Developer. The ideal candidate will be a native Indonesian experienced in ASP.NET web development.

- Reports to Lead Software Developer
- Develop and maintain web applications front-end
